

Initial data

Bonus functions:
pitilla_data(): practice BWG dataset
%notin%: opposite of %in%

Data preparation
BWG data users only

add_taxonomy(): add taxonomy columns from BWG database
database_data(): check BWG database data
get_bwg_names(): check list of unique bwg_name in BWG database

Make data BWG-compatible

Data checking

name_herder(): assign BWG names if none (BWG data users only)
data_checker(): check data formatting
tipulimo(): Tipulidae and Limoniidae are so similar they can be grouped in one family

Make data hellometry-compatible

make_measurement_table()

get_measurements(): get BWG measurements (BWG data users only)
append_names(): add all species names to measurement_table
append_measurement(): add ll numeric measurements to measurement_table
tipulimo(): Tipulidae and Limoniidae are so similar they can be grouped in one family

Group all species and measurements into a single table

full_estimation_table()

dry_wet(): for models, only keep dry or wet measurements of body/biomass

Get size estimations and allometric models

Compute biomass and stick to data

Document and return data

Output data

hellometry()
